Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

polynticrotics in an engine in the foat cell development such as atherosclerosis, cerebral stroke, and cardiovascular disorders such as coronary artery disease. The polynucleotide sequences can also be used as PCR primers and probes. The polynucleotides of the invention are also useful in gene therapy. Ass94746 Ass9501 represent the human polynucleotide sequences of the invention which are differentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Composition useful for diagnosis of conditions, disorders or diseases associated with atherosclerosis, comprises several polynucleotides that are differentially expressed in foam cell development -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of human polynucleotide sequences that are differentially expressed during foam cell differentiation. The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high throughput method for detecting altered expression of one or more polynucleotides in a sample. The polynucleotides can be used in the

Ruben SM;

Isolated polypeptide for treating, preventing and/or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.

Example 2; SEQ ID NO 3534; 781pp + Sequence Listing; English.

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)aponists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune control canaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, anutiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myccardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and the finifectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly

ö
          dational and a puryper of the binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Whote: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
a polypeptide in tissue, as molecular weight markers and as
                                                                                                                                                                                                                                                                                                                                                                                                               1539 Arecordrescescrescresascrescescescescescescescescescescesces 1480

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -Ruben SM; Barash SC, WPI; 2001-483426/52. Rosen CA,

Disclosure; SEQ ID NO 28083; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic

Nucleic acids encoding human immune/hematopoietic antigen polypeptides,

PT useful for preventing, diagnosing and/or treating cancers and

PT useful for preventing, diagnosing and/or treating cancers and

PT metastasis -

NX

NX

ANX54951 to AAX64702 encode the human immune/haematopoietic antigen (1)

CC activity, and can be used in gene therapy and vaccine production. (I)

CC activity, and can be used in gene therapy and vaccine production. (I)

CC cample, they may be used in gene therapy and vaccine production. (I)

CC example, they may be used to treat disorders associated with decreased

CC example, they may be used to treat disorders associated with decreased

CC example, they may be used to produce a patient's genome

CC example, they may be used to treat disorders associated with decreased

CC example, they may be used to treat disorders associated with decreased

CC example, they may be used to treat disorders associated with decreased

CC supplement the patients own production of (1). Additionally, (1)

CC supplement the patients own production of (1). Additionally, (1)

CC polynucleotides may be used to produce the secreted (1), by Inserting

CC protein. (1) proteins and polynucleotides may be used to prevent,

CC diagnose and treat immune/haematopoietic-derived cells. AAX64703

CC cancers and cancer metastases of haematopoietic-derived cells. AAX64703

CC cancers and cancer metastases of haematopoietic-derived cells. AAX64703

CC cancers and cancer metastases of haematopoietic antigen genomic

CC ceancers and cancer metastases of haematopoietic antigen genomic

CC ceancers and cancer metastases of haematopoietic antigen genomic

CC sequences from the present invention. AAX64921 to AAX64950 and AAX64703

CC represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           proteins and polymucherotuses may be used in the prevention of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell, by inserting protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of hematapoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK87492 to AAK874950 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1950 tittettittittittigagatggagtticgetetgicacecaggitggggtacagiggt 2009

and a ARK64951 to a AK64702 encode the human immune/haematopoietic antigen (1) and acid sequences given in AAM82170 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of mutations or deletions in a patient's genome cuplement the patients own production of (1). Additionally, (1) polynuclectides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynuclectides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic arityed cells. AAK64703 cancers and cancer metastases of haematopoietic arityed genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding human immune/hematopoietic antigen polypeptides, actuating cancers and

                                                                                                                                                                                                                                                                                                                                                                                                                                                      in the diagnosis, treatment and prevention of: (3) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hambenolytic ansemia, autoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple solerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological disease e.g. cerebral anoxia and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections this patent did not form part of the
                                                                                                                                                                                                                                            The invention relates to movel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human lissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mucleic acids encoding 3224 human nervous system antigen polypeptides,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                            1536

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain recombinant production of (II). The collection are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for restore normal activity of (II) at useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polymeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences. Assetting the products dependent on bNA and diagnostic coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   printed

This invention describes novel antisense oligonucleotides targeted to sequences in the 3' end of thymidylate synthase (TS) mRNA. Such oligonucleotides are cytostatic on their own when administered to human tumour cell lines, and also enhance the toxicity of anticancer drugs such as Tomudex administered to those cells. In addition, antisense oligonucleotides targeted to 5' sequences induce TS gene transcription. The antisense oligonucleotides are used in a method for the
                                                                                                                                                                                                                                                                                                              The antisense oligonucleotides are also used in the production of a medicant for the treatment of cancer, either separately or in conjunction with a therapeutic agent such as thymidylate synthase (TS) inhibitors
                                                                                                                                                                                                                                                                         treatment of cancer (or a method for providing antiproliferative effect)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  agents (e.g. antioestrogens, (anti)progestogens, antiandrogens, testosterone inhibitors, anti-invasion agents, growth factor inhibitors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1031 tggaaatggctgtttagggtgctttcaaaggagctCgaaggatattgtcagtctttaggg 1090

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents the nucleotide sequence of Varicella virus, Oka strain. The specification describes a method for the quality control of an attenuated pox vaccine, characterised in that the DNA sequence of specific parts of the viral genome in a sample is determined and proved to be conserved rather than mutated in comparison with the same parts of a reference viral genome. The method is useful for quality control of vaccines for use in the prevention of poxvirus
                                                                                                                                                                                                                                                                                                                                                                                                                Method for checking absence of mutation at specific positions of varicella virus genome for quality control of attenuated live varicella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  aaatgaattteetettttaaetaeaaagegtgtttttggagggeegtegtggaagagtt 18621

RESULT 10 AAV73802/c

the Kaposi's sarcoma-associated herpes virus (KSRY), KSHY is also known as human herpes virus 8 (HHV8). This sequence contains the DNAs of the invention which encode KSHY polypeptides selected from: (a) viral complement-binding protein; glycoproteins B, W or Li, (c) viral TRE 1; (d) complement-binding protein; glycoproteins B, W or Li, (d) capsid protein IV encoded by ORF65; and (e) immediate early protein encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded by it, and antibodies (Ab) specific for the proteins are useful for detecting HHV8, specifically for diagnosis of Kaposi's sarcoma, in body of it, and antibodies (Ab) specific for the proteins are useful for detecting HHV8, specifically for diagnosis of Kaposi's sarcoma, in body of thicks or tissue samples. HHV8 infections can be treated with antisense or triplex forming moleonies or agents that bind specifically to the protein can be used in protective vaccines. Ab may also be used to differentiate between lymphomas, and HHV8 may be implicated in many other lymphoproliferative diseases such as lymphomas, lenkemia, the promession mycosis fungaides. Cells and animals containing the contein as targets for antiviral drugs, e.g. dihydrofolate reductase gene can be inhibited with methotrexate. These can also be used to determine to the immune status of a patient infected with HHV. HHVB derived protein cells and an also be used to determine the immune status of a patient infected with HHV. HHVB derived protein cells in the immune status of a patient infected with HHV. HHVB derived protein cells and a treated as containing the cells and an also be used to determine the immune status of a patient infected with HHV. HHVB derived protein cells in the immune status of a patient infected with HV. HHVB derived protein cells the immune status of a patient infected with HV. HVB derived protein cells in the immune status of a patient infected with HV. HVB derived as containing the cells anoted in the cells and an infection of the cells and an infection sequence represents the long unique region and terminal repeat of open reading frames

Sequences AAA7722-A78199 represent 478 cDNAs encoding proteins or portions of proteins which are associated with human colon tumours. The invention also specifically discloses 8 human colon tumour proteins (AAB11897-B11904). The nucleic acids, the polypeptides they encode, and antigen presenting cells (APCs, preferably dendritic cells) expressing acting typeptides may be used in vaccines that target tumour cells, especially colon tumour cells. Thereby inhibiting the development of cancer. T-cells specific for the polypeptide expressed by the APC are used to remove tumour cells from biological samples, sepecific for the polypeptide can then be used to inhibit cancer development. CD4+ and/or fractions thereof. The sample or the isolated T-cells specific for the polypeptide can then be used to inhibit cancer development. CD4+ and/or colls from a patient may be incubated with a polypeptide, to cause the proliferation of specific T-cells. The T-cells can be consent the polypeptides may be used to determine the expression level cancer cells are present. Such diagnostic methods may also be used to monitor the progression of a cancer by separating the processes at time intervals, and comparing the current result to prevelous results. The intervals.
New colon tumor polypeptides used to inhibit the development of cancer, especially colon cancer, and for diagnosing and monitoring the progression of the cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ctaaaagaaggaactaggtcaaaaatctgtccgtgacctatcagttattaattttta 1186
